

LAN Extender

Product number D1C8413
Weight 0.55kg

Product description

The Oehlbach LAN Extender (HDMI® via network cable) for 4K Ultra HD signals pass big distances where HDMI® cables loses signal quality. It reliably transmits 4K signals at 60 Hz up to 30 m and at 30 Hz Ultra HD even 50 m range. This set of transmitter and receiver uses Cat 6/6a or 7 network cables to transmit over long distances. The signal source is connected to the transmitter via HDMI® cable. The Oehlbach LAN Extender seamlessly integrates its transmitter with HDMI® Loopout into any home cinema system and then transmits the HDMI® signal via LAN to the LAN receiver, which is then connected via HDMI® to the output medium (TV, beamer, etc.). Both boxes in a robust metal housing feature IR passback and infrared sensors so that the HDMI® source - such as Blu-ray players or SAT receivers - can be controlled conveniently from a distance.

Product properties

Features	24kt gold plated contacts
Plug type 2	RJ-45, HDMI
Temperature range:	5-50°C
Housing material	Ultra thin single conductors
Lizenzen	HDMI EN 2
Colour	Black
Quality level	Excellence
Plug type 1	RJ-45, HDMI
Product Category	Electronics
Signal direction	OUT
Screen resolution	4K UHD 50/60 Hz
Connection type	Video
