HIGH-SPEED HDMI® CABLE WITH ETHERNET CARB CONNECT MKII

WITH ETHERNET

HIGH-SPEED HDMI® cable with superior technical features. The additional data channel (Ethernet channel) allows Internet-enabled AV components, e.g. Blu-ray players and AV receivers, to be connected without the need for additional network cables. The innovative inner conductor produces previously undreamt of transmission qualities due to its extremely high levels of purity. Quadruple-shielded and separated internal conductors also ensure optimal signal transfer for resolutions greater than 1080p. 24-carat gold-plated contacts connect these high-end cables almost resistance-free to a variety of devices, e.g. LCD TVs and Blu-ray players. The durable, elegant fabric sheathing and solid metal contacts with carbon inlays emphasise the exceptional quality of this 5-star product.
