

A 3D rendering of a multi-core cable, likely a power or data cable. The cable is shown in a perspective view, with the outer jacket partially removed to reveal the internal structure. The internal structure consists of multiple copper conductors, each surrounded by a braided shield. The conductors are arranged in a central core, and the braided shield is made of a fine, woven metal mesh. The outer jacket is a dark, textured material. The overall appearance is that of a high-quality, industrial-grade cable.
